

"THE NO BRAIN" STRATEGY

Wait until a 4h candle closed above / below the MA20,
which opened below / above the MA20

1

2

The trade is executed after the H4 close with a
limit or an instant buy / sell.

The stop loss is set above / below the H4 signal candle.

3

4

The Risk Reward Ratio is 1.5 and if this cannot be
achieved because a strong support or something in
between then you don't make the trade!

No limit will be left in the market for more than 4 hours!!

5

6

Everything will be closed before the weekend!

Signals due to "weak" candles are ignored.

7

8

As soon as a candle gives a counter-signal in the other
direction than the current trade, then close the current
trade at H4 close and think about a trade in
the new direction.
